DATA LITERACY

Literacy Is a Two-Way Street

The Case for Both Business and Data Literacy

Wendy D. Lynch PhD.

One way.... From Data to Nirvana

A large green billboard on a tall metal post with a ladder, displaying a table of data. The billboard is positioned on the right side of a road in a mountainous landscape.

AHEAD
SUCCESS
BTZ

Where are we trying to go?

Data inputs

Analytics

Biz outcome

Many places

At the same time

When the business needs data

**Business
Environment**

**Analytic
Environment**

When the business needs data

Business Environment

Analytic Environment

When the business needs data

Business Environment

Request from business

Results Received

Business language

Gap in Understanding

Analytic language

Analytic Environment

Create design

Do analysis

Package results

Three lane
highway
mainway

Sometimes it's not the way we think of literacy

It's more than words
It's context

“I need a dashboard

“We need to trim the budget....”

“I need a **dashboard** that shows comparative performance across locations

“We need to trim the **budget**.....”

Earnings

Every day
in corporations around the world
there are literally millions of
requests where the two teams
don't understand each other.

Revenue

Business leaders want

Data Teams want

Timely, innovative insights from data

That deliver measurable value

More data awareness

More business awareness

Meaningful, challenging work

That is appreciated and valued

The problem is not

**insufficient resources
wrong tools or systems**

It's seeing things one way

How Analytic Translators Handle This Challenge

Let's appreciate our differences.....

\$\$ (\$\$) *EBITA* P:E
NET REVENUE KPI

Business Leaders

$$\sigma = \sqrt{\frac{\sum(x_i - \mu)^2}{N}}$$

p < .001. R²

Data Scientists

.....speak different languages

Let's appreciate our differences.....

Business Leaders

ESTJ

Personality

Extroverted
obServant
Thinking
Judging

Data Scientists

Personality

Introverted
iNtuitive
Thinking
Prospecting

INTP

.....attract different types

There is a good reason for each style

Does your product improve employee performance?

Yes.
Next question.

Our analysis controlled for demographics, tenure, previous performance, location and job type. And we did a time series analysis removing seasonality, transforming the outcome into a binomial, showing that participants had significantly higher likelihood of improvement at a P-value of 0.02.

.....trained in very different ways

Trained to clear and action oriented:

Differentiators
Opportunities
Decisions
Pivots
Actions for success

Business Leaders

Not trained

Advanced statistics
Communication skills

Trained to formally doubt results:

Reasons you may be wrong
Quantifying likelihood of error
Limitations
Uncertainties
Potential bias

Data Scientists

Not trained

Business management
Communication skills

..... Different preferences (how people will hear us)

Want to deliver results:

Simple
Clear
Understandable
Indisputable
Convincing.

So clear it
needs no
explanation

Business Leaders

Want people to understand:

Complex possibilities
Something new and different
How interesting this is
That this is unique
That we used advanced techniques.

So interesting
everyone wants
an explanation

Data Scientists

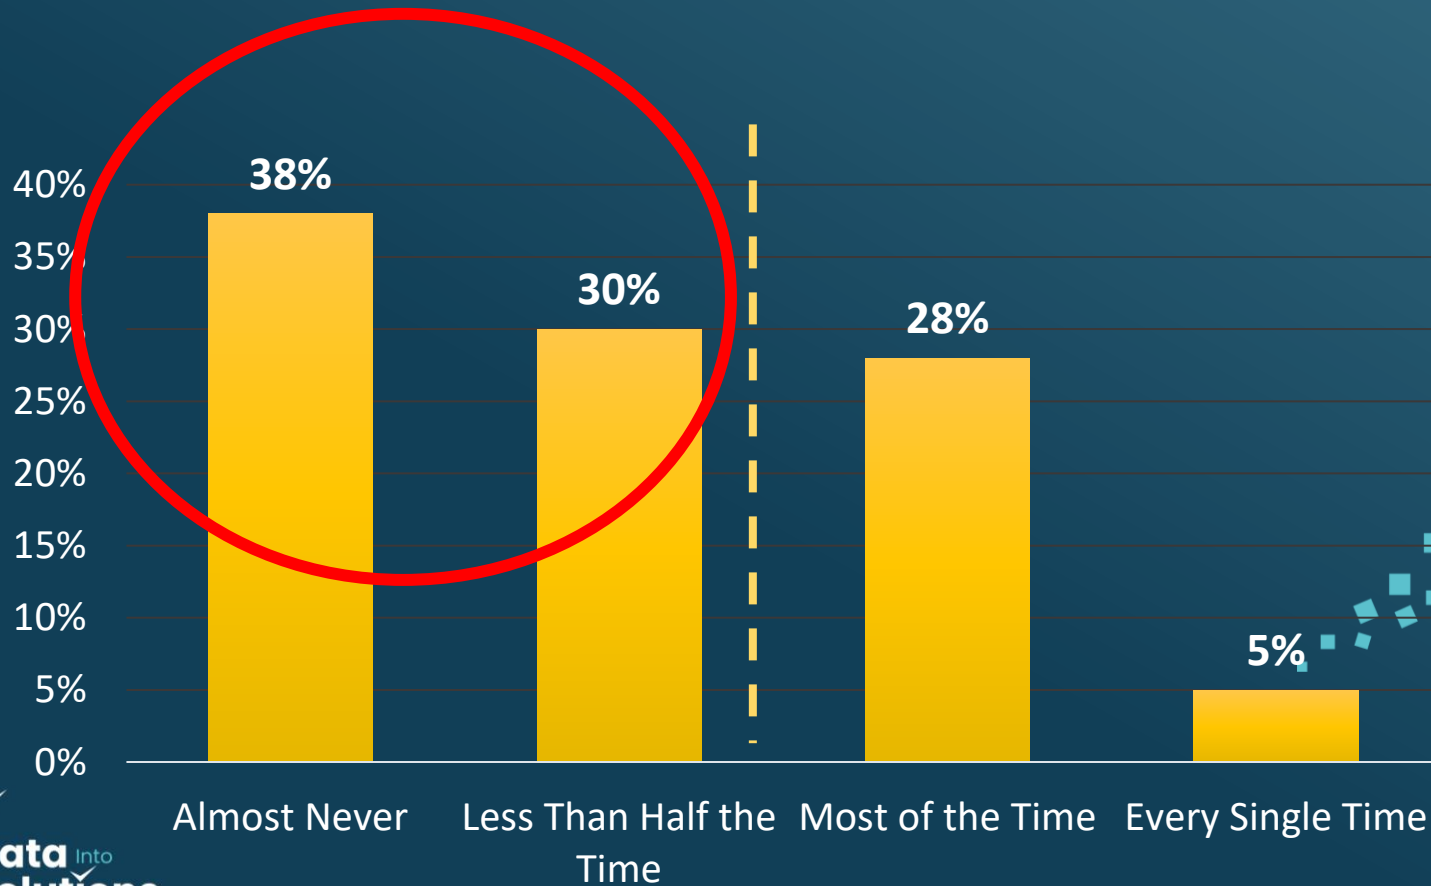

What we know
about each other

AND

How we talk
to each other

When you get a request...

How often are you able to provide the exact answer they want, the first time, with no rework?

"I answered 'most of the time.'

Because, technically, I did give them exactly what they asked for.

Even though it wasn't what they wanted."

What happens without two-way understanding

Both directions

- Expectations of mind-reading

Expertise requires unique terminology

CFOs

Pilots

Artists

Social media marketers

WITHIN A PROFESSION

Insider language unites

BETWEEN PROFESSIONS

Insider language divides

We need to BOTH:

- *work to understand priorities*
- *avoid assuming others know*

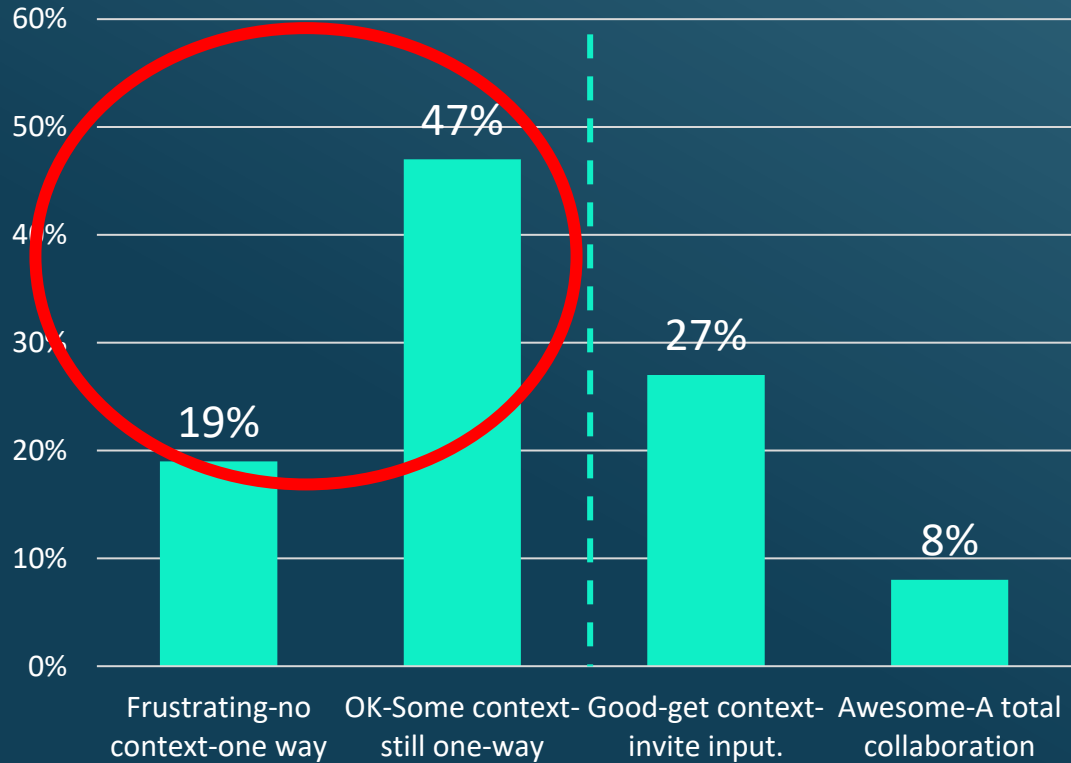

What happens without two-way understanding

**Both
directions**

- **Expectations of mind-reading**
- **Insider jargon**

Analytic team describes requests from business.

“They give me a request with little or no context. They don’t ask for my input.”

When the business needs data

Business Environment

Request from business

What happens without two-way understanding

**Both
directions**

- **Expectations of mind-reading**
- **Insider jargon**

**Business to
Analytics**

- **Drive-bys**
- **Fire drills**

**Analytics to
Business**

- **Granades or buried treasure**

Uh, what?

We did a logarithmic transformation to minimize heteroscedasticity, then once we confirmed homogeneity of variance, performed gradient boosting...

What happens without two-way understanding

**Both
directions**

- **Expectations of mind-reading**
- **Insider jargon**

**Business to
Analytics**

- **Drive-bys**
- **Fire drills**

**Analytics to
Business**

- **Granades**
- **Polysyllabic = smart**

How we fix these

1. Two-way Literacy

Identify and prioritize what matters to others.

2. Time

A few minutes to clarify is better than weeks of rework.

3. Skills

Learn to clarify with questions that uncover context.

Simple, yet powerful, tools

- Open-ended invitations
 - Say more about.....
 - Can you tell me more about how this came up?
 - When you say _____.....
- Questions to explore levels of meaning
 - How will that be useful?
 - How will you decide?
 - How will you know?

Think of an important question
your organization needs to answer using data.

Jot it down.

Keep that question in mind as I ask you a few things:

How did that question come up?

How will the answer be useful?

Who might be interested in the answer, and why?

How will you know it has been answered satisfactorily?

What is the important time frame for this questions?

Should anything specific be included or excluded?

Is there anything else we might need to know first?

Did any of these questions make you want to adjust
how you worded your first question?

Key aspect of analytic translation:

The first thing someone says is not the full answer and

Probably NOT what really matters.

Terminology is not enough

- Words we choose
- What those words mean (to them)
- What matters about them
- How we deliver them
- What the context is

Ongoing and Evolving

Analytics

Data inputs

Biz outcome

Many places

At the same time

Business leaders want

Data Teams want
