

Ethics, Privacy, and Policy: Building Trust Through Governance

A monthly webinar series from

DATAVERSITY®

Question 1

Trust seems to be the centerpiece of every AI governance discussion today. Why do you think trust has become the metric everyone cares about, and can it actually be governed?

Question 2

Many organizations rush to write an AI policy as their first governance artifact. Is policy really the starting point, or should organizations focus on principles, culture, or risk understanding first?

Question 3

Privacy, innovation, and business value; leaders often say they want all three. In practice, where do organizations tend to compromise, and what are the consequences of getting that balance wrong?

Question 4

Between regulations, frameworks, standards, risk assessments, and policies, are we creating governance programs that are too heavy to succeed?

Question 5

What conversations should CEOs, boards, and senior leaders be having about AI governance that they're not having today?

GOVERN YOUR DATA. GOVERN YOUR AI.

The Agenda Is Live.
Your Plan Starts Here.

NOVEMBER 16-19, 2026
PROVIDENCE, RHODE ISLAND

Question 6

We often encounter situations where data use or AI deployment is technically allowed but raises ethical concerns. How should governance teams navigate that gray area?

Question 7

If you had to place a bet, will the future of trustworthy AI be driven more by advances in technology or by organizations developing better governance, ethics, and decision-making capabilities?
