#### Definitions

- Data Governance The execution and enforcement of authority over data.
- Data Stewardship Formal accountability for data.
- Data Steward A person held formally accountable for their relationship to the data.
- Data Management Refers to the comprehensive process of acquiring, organizing, storing, securing, processing, analyzing, and maintaining data to ensure its accuracy, accessibility, reliability, and relevance throughout its lifecycle within an organization.
- **Blueprint** A blueprint is a **detailed plan or design** that serves as a **guide for constructing something** complex or intricate. It provides a **visual representation** of architectural structures, engineering projects, or systems, outlining dimensions, arrangements, and specifications necessary for implementation.
- A blueprint can also symbolize a strategic framework or roadmap for achieving long-term goals, embodying the meticulous planning and forethought required to bring ambitious visions to life.

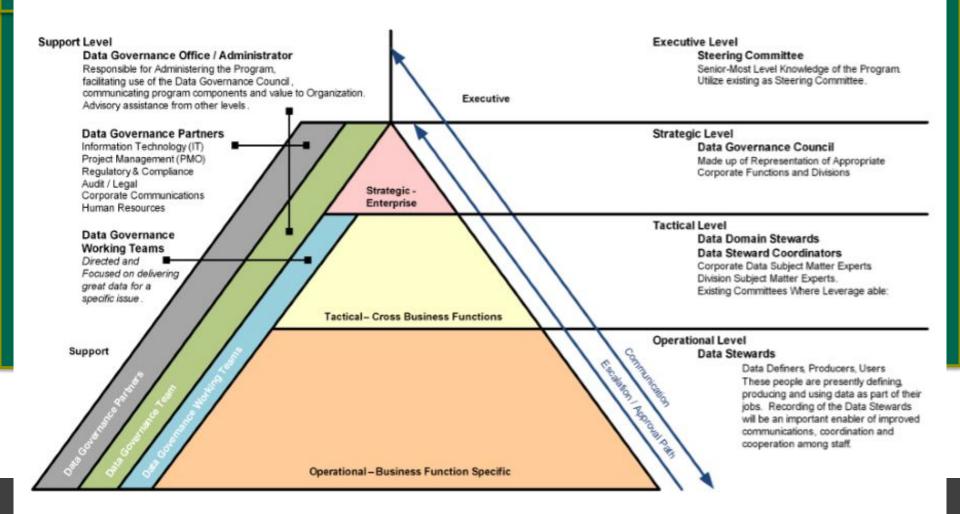

Crucial Roles Needed to Establish and Sustain a Thriving Data Governance Program

Corporate Communications

- Customer Service

Crucial Roles Needed to Establish and Sustain a Thriving Data Governance Program

- Establish and Sustain
  - The Heart of Your Program
    - Defining the Roles
    - Communicating the Roles
    - Acknowledging the Roles
    - Engaging the Roles
    - Promoting the Roles
    - Growing the Roles
    - Maintaining the Roles

Insights into the Responsibilities and Skill Sets Required for Each Key Role

- Give the BELT to the ELT (TDAN Article in March)
- SEE Your Data Governance Council (LinkedIn Article in December)
- Recognize Your Data Stewards / Everybody is a Data Stewar
- Partnerships are Key
- Blueprint Roles and Responsibilities

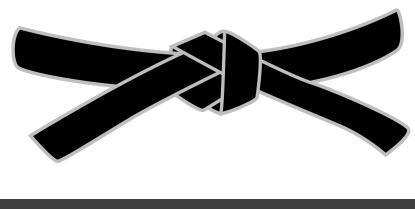

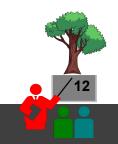

Insights into the Responsibilities and Skill Sets Required for Each Key Role

- Give the BELT to the ELT
  - Buy-in: Gaining organizational commitment and support from all levels.
  - Empowerment: Enabling stakeholders with the authority to make decisions related to data.
  - Leadership: Demonstrating strong leadership to guide the organization through change.
  - Transformation: Fostering a culture that values data as a strategic asset.

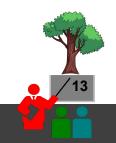

Insights into the Responsibilities and Skill Sets Required for Each Key Role

- SEE Your Data Governance Council
  - Stand Up: Lay the groundwork for an effective and representative governing body.
  - Empower: Endow the council with the authority, resources, and decision-making capabilities.
  - Engage: Foster active participation and collaboration.

Insights into the Responsibilities and Skill Sets Required for Each Key Role

- Recognize Your Data Stewards / Everybody is a Data Steward
  - Definition of a Data Steward: A person held formally accountable for the actions they take with data.
  - Accountable for how they **define** data.
  - Accountable for how they **produce** data.
  - Accountable for how they **use** data.
  - Everybody is a Data Steward. Get Over It.

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Insights into the Responsibilities and Skill Sets Required for Each Key Role

- Partnerships are Key
  - There are already group that are governing in your organization.
  - They are your natural partners.
  - You don't want their responsibilities and they do not want yours.
  - IT governs IT related stuff like projects, portfolios, spending of IT's budget.
  - Governing functions include:
    - Project Management
    - Information Technology
    - Risk Management

- Finance
- Human Resources
- Corporate Communications

#### Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Executive Level Roles
- Strategic Level Roles
- Tactical Level Roles
- Operational Level Roles
- Support Level Roles

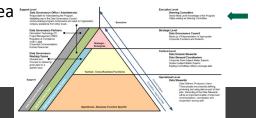

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Executive Level Roles
  - Responsibilities:
    - Setting high-level data governance strategies and objectives.
    - Providing oversight and guidance for data governance initiatives.
    - Allocating resources and support for data governance efforts.
    - Approving major data-related policies and decisions.
    - Handling significant data-related incidents or breaches.
  - Members:
    - C-Level Executives (CEO, CFO, CIO, etc.).
    - Chief Data Officer (CDO) or equivalent.
    - Business Leaders representing key functional area

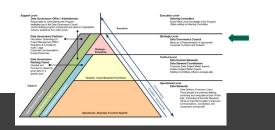

Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Strategic Level Roles
  - Responsibilities:
    - Defining/Approving overarching data policies and priorities aligned with business strategy.
    - Establishing data governance frameworks and standards.
    - Assigning data ownership and stewardship responsibilities.
    - Identifying critical data assets and their strategic value.
    - Monitoring & evaluating the effectiveness of governance initiatives.
  - Members:
    - Representatives from key business functions.
    - Data Governance Manager or Leader.
    - Compliance Officer.

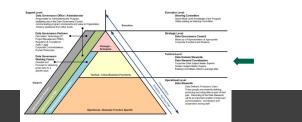

Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Tactical Level Roles
  - Responsibilities:
    - Coordinating and facilitating data-related activities across different business functions.
    - Conducting data profiling, cleansing, and integration.
    - Ensuring consistency and quality of data within their respective domains.
    - Collaborating w/data stewards and IT teams for seamless information flow.
  - Members:
    - Functional experts from various business units.
    - Business Analysts.
    - Data Analysts.

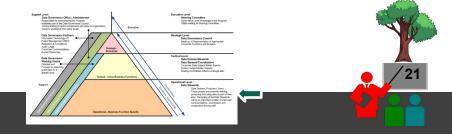

Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Operational Level Roles
  - Responsibilities:
    - Executing day-to-day data management tasks within specific business functions.
    - Ensuring accurate data entry, validation, and reporting.
    - Managing data access and permissions and enforcing security measures.
    - Overseeing the quality and integrity of specific data sets.
    - Providing subject matter expertise on data-related matters.
  - Members:
    - Individuals recognized as being formally accountable for the actions they take with data within their respective functional areas.

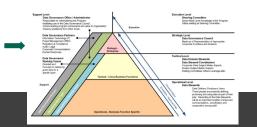

Practical Strategies for Recognizing Existing DG Roles Within Your Organization

- Support Level Roles
  - Responsibilities:
    - Providing the infrastructure, tools, expertise to enable effective data governance & management.
    - Overseeing IT systems, data platforms, and applications supporting data processing and analysis.
    - Managing partnerships w/external vendors and ensuring compliance with data governance policies.
    - Coordinating training, communication, and documentation efforts related to data governance.
  - Members:
    - IT Professionals.
    - External Partners and Vendors.
    - Program Administrators.
    - Cross-Functional Working Teams.

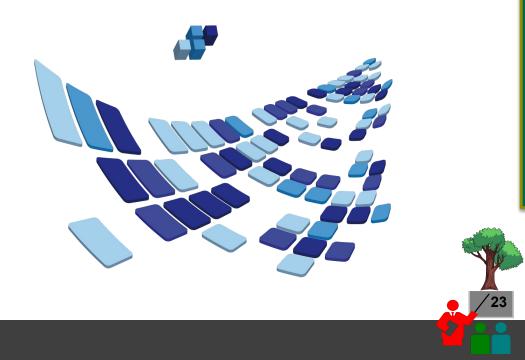

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Align Roles with Business Strategy
- Link Initiatives to KPIs
- Integrate into Business Processes
- Enhance Collaboration Across Units
- Leverage for Compliance and Agility

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Align Roles with Business Strategy
  - Strategic Involvement in Decision-Making: Ensure that individuals in key data governance roles are involved in strategic planning and decision-making processes. This allows them to understand the business's direction and align data governance initiatives with strategic goals.
  - Clear Definition of Business Value: Articulate and communicate the specific business value that data governance brings to different parts of the organization. This involves identifying how data governance supports business outcomes, such as improved decision-making, compliance with regulations, or enhanced customer satisfaction.
  - Integration with Business Processes: Embed data governance roles and responsibilities into existing business processes. By integrating data governance activities with routine business operations, organizations can ensure that data governance becomes a natural part of the business workflow rather than a separate or isolated function.

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Align Roles with Business Strategy
  - Training and Awareness Programs: Develop targeted training and awareness programs that highlight the connection between data governance roles and business objectives. Tailoring training to show how data governance practices contribute to achieving strategic priorities can motivate individuals in these roles to align their efforts with broader business goals.
  - Performance Metrics and Incentives: Establish performance metrics and incentives that reflect the contribution of data governance roles to achieving strategic business objectives. By setting targets and recognizing achievements that directly support business strategy, organizations can encourage behaviors that align with their strategic direction. This could include metrics related to data quality improvements, efficiency gains, or the successful implementation of data governance policies that support new business initiatives.

Non-Invasive Data Governance  $^{\mathrm{\scriptscriptstyle M}}$  is a trademark of Robert S. Seiner & KIK Consulting

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Link Initiatives to KPIs
  - Map Data Governance Activities to Business KPIs: Directly correlate specific data governance initiatives with the business KPIs they impact. For instance, if improving customer satisfaction is a KPI, illustrate how enhancing customer data quality directly contributes to this goal. This linkage helps to quantify the value of data governance in terms of measurable business outcomes.
  - Establish Data-Specific KPIs: Create KPIs that specifically measure the impact of data governance on business performance. These might include metrics like the reduction in data errors reported, improvements in data processing times, or the decrease in compliance incidents due to better data management. Aligning these data-specific KPIs with broader business objectives reinforces the role of data governance in achieving strategic goals.
  - Regular Reporting and Review: Implement regular reporting mechanisms to track and communicate the progress of data governance initiatives against defined KPIs. Incorporate data governance metrics into executive dashboards to ensure visibility at the highest levels of the organization. Regular reviews can help to adjust strategies as needed to ensure alignment with changing business objectives.

26

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Link Initiatives to KPIs
  - Incentivize Achievement of Data Governance KPIs: Integrate the achievement of data governance-related KPIs into performance evaluations and incentive structures for roles within the data governance framework. This approach motivates individuals to align their activities with not only data governance objectives but also broader business goals.
  - Integrate Data Governance into Business Strategy Planning: Involve data governance leaders in the strategic business planning process to ensure that upcoming data governance initiatives are designed with a clear understanding of business objectives and KPIs. This integration ensures that new data governance efforts are preemptively aligned with the strategic direction and KPIs of the organization.

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Integrate into Business Processes
  - Embed Data Stewards in Business Units: Place data stewards directly within business units to ensure data governance practices are closely aligned with daily business operations. This proximity allows data stewards to better understand specific business needs, challenges, and opportunities for data optimization, facilitating more relevant and timely governance actions that directly support business objectives.
  - Participate in Business Process Design: Involve data governance personnel in the design and review of business processes. This ensures that data handling, quality standards, and compliance requirements are considered from the outset, integrating data governance principles into the fabric of business operations.
  - Cross-functional Collaboration Teams: Create cross-functional teams comprising members from data governance roles and various business units to work on shared projects and initiatives. These teams can focus on aligning data governance activities with business process improvements, ensuring that data governance supports and enhances key business processes.

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Integrate into Business Processes
  - Develop Process-Centric Data Policies: Tailor data governance policies to support specific business processes. For example, develop data quality standards and access policies that reflect the needs of critical business operations, such as customer relationship management or financial reporting. By making data policies relevant to specific processes, it's easier to demonstrate their value and ensure compliance.
  - Leverage Process Improvement Initiatives: Use existing business process improvement initiatives as
    opportunities to reinforce or introduce data governance practices. For instance, when a business
    process is being streamlined or automated, ensure that data governance considerations are
    integrated into the project plan. This might include implementing data quality checks or establishing
    clear data lineage as part of the process improvement effort.

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Enhance Collaboration Across Units
  - Cross-Unit Data Governance Councils: Establish cross-unit data governance councils that bring together data stewards, data owners, and business unit leaders from across the organization. These councils facilitate strategic discussions on data governance policies, standards, and initiatives, ensuring alignment with the organization's overall business goals and fostering a unified approach to data governance.
  - Joint Data Governance Projects: Initiate joint data governance projects involving multiple business units. These projects could focus on common challenges, such as data quality improvement or master data management. Working together on shared goals helps to break down silos, encourages knowledge sharing, and ensures that data governance efforts are aligned with the needs and objectives of different parts of the organization.
  - Shared Data Governance Platforms: Implement shared data governance platforms and tools that are accessible to all units. Platforms such as a centralized business glossary, metadata repository, or data catalog facilitate collaboration by providing a single source of truth for data definitions, standards, and policies. This makes it easier for different units to work together using consistent data governance trameworks.

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Enhance Collaboration Across Units
  - Data Governance Liaison Roles: Create data governance liaison roles within each business unit. These
    liaisons are responsible for coordinating data governance activities within their units, communicating
    with the central data governance team, and ensuring that unit-specific concerns and requirements are
    considered in broader data governance strategies.
  - Collaborative Training and Awareness Programs: Develop and implement collaborative training and awareness programs that involve participants from across the organization. These programs should cover data governance principles, the organization's data governance framework, and the roles and responsibilities of different stakeholders.

Non-Invasive Data Governance<sup>™</sup> is a trademark of Robert S. Seiner & KIK Consulting

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Leverage for Compliance and Agility
  - Integrate Compliance into Data Governance Roles: Explicitly include regulatory compliance responsibilities within the roles of data stewards and data owners. This ensures that compliance is considered in everyday data management tasks, from defining data standards to implementing data quality controls.
  - Agility in Data Governance Frameworks: Design data governance frameworks with flexibility and agility in mind, allowing for rapid adaptation to new regulations and market conditions. This involves creating scalable policies, standards, and processes that can be quickly adjusted as needed.
  - Data Governance as a Facilitator for Quick Decision-Making: Position data governance roles as facilitators for quick and informed decision-making. This involves ensuring that data stewards and data owners are empowered to make decisions regarding data usage, sharing, and quality within their domains, based on a clear understanding of compliance requirements and business objectives.

Ways to Align Data Governance Roles with Broader Business Objectives and Initiatives

- Leverage for Compliance and Agility
  - Leverage Data Governance for Risk Management: Utilize data governance roles to identify and manage data-related risks, including those associated with compliance and operational agility. This involves conducting regular data risk assessments and integrating risk management into the data governance strategy.
  - Use Technology to Support Compliance and Agility: Leverage technology solutions that support both compliance and agility within data governance roles. For example, investing in data management and governance platforms that offer built-in compliance features (such as automatic data classification, data lineage tracking, and privacy impact assessments) can help organizations stay compliant while remaining agile.
