

Connecting Data Literacy

to
Individual
Performance

How do we make data **meaningful**?

Or..... Why should I care?

Literacy Training

This Way

MATH AHEAD

Learn or Die

WELCOME TO LITERACY TRAINING!!

More Math = More Fun !!

We need our people to have
high data literacy

So, they can make **reliable**
data-driven decisions

We need our people to
high data

Um... they already do
they can make
data-driven decisions

In modern society, we all

USE

DEPEND ON

COMPARE

DECIDE TO BELIEVE

REACT TO

DEBATE

CELEBRATE RESULTS OF

every day.

DATA

We rely on consistent standards and units

We take for granted that we can depend on

Because standards are agreed upon

What time it is

When Christmas will be

Who holds a world record

What 70 degrees feels like

The dollars in our bank statement

How far a mile is

How fast the speedometer says we're going

The weight of a 5lb dumbbell

We make confident comparisons

Today was colder

My team scored more points

This job pays more

That stock price is higher than last week

I've lost weight!

This car gets more miles per gallon

Because data are collected, and standards are applied consistently

We make data-driven decisions

We respond to real time data and predictions

Because we
(usually)
trust the
sources

It will rain Sunday.. Let's picnic on Saturday

Traffic is backed up on Google.... I will go another way

Interest rates are down.... Time to buy a house

Plane fares are usually lower in the fall... I'll go then

There will be an eclipse on May 3rd... let's go see

Today, **everyone** is a data creator

Every purchase on a credit card

Every amazon review

Every phone call

Every ATM withdrawal

Every email

Every text

Every Google search

Every Netflix movie viewed

Every story read

Every Like on Instagram

Every camera we pass by

Every report we download

Every prospect we list in Salesforce

Every click on a website

Every location our phone tracks

Every step on our fitbit

Every person we tag

Every score we enter

Every group we belong to

Every prescription we fill

Now we leave behind data like dust

When

How many

How much

What

What time

Who

duration

Where

How fast

Our digital footprints

Are only getting bigger and brighter

We interact with
AND INFLUENCE
data
constantly

Choosing how honest to be

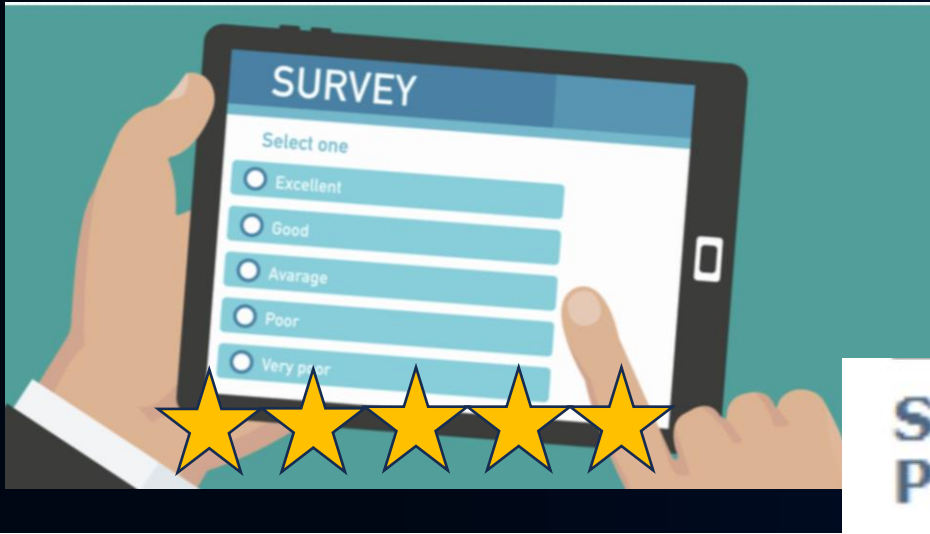

Let's assess health behaviors

A majority of respondents underreport unhealthy answers

Choosing whether to participate

Will you answer a survey?

Surveys Face Growing Difficulty Reaching, Persuading Potential Respondents

	1997	2000	2003	2006	2009	2012
	%	%	%	%	%	%
Contact rate (percent of households in which an adult was reached)	90	77	79	73	72	62
Cooperation rate (percent of households contacted that yielded an interview)	43	40	34	31	21	14
Response rate (percent of households sampled that yielded an interview)	36	28	25	21	15	9

Deciding what to reveal

“We hire only the best”

Lies Candidates Told on Resumes

72% of respondents admit lying on their resume

Today, **everyone** is a data creator **and** a data evaluator

How do you decide if you believe it?

Which Product to Choose

"I look at the reviews"

If My Performance Review is Fair

There are too many 5's. Make it a normal curve

“Your rating has gone down. But don't worry.”

If there is evidence to convict?

One in 10 Billion

“But, how can they know?”

A lack of Scientific Literacy

DNA Match

So, we already use/evaluate data.

**How do we translate
that into literacy?**

“The ability to read, write and communicate data”

Confident they have these skills

What is Literacy?

“The ability to read, write and communicate data....”

...in context, including an understanding of data sources and constructs, analytical methods and techniques applied – and the ability to describe the use case, application and resulting value.”

Many definitions

In order to be data literate in the workplace, one **must**:

- Know **which data are appropriate** to use for answering a particular business question.
- Have the ability to **read charts and graphs** in order to interpret the data.
- Understand the **path of data** from its source to the data visualization.
- Know how to **represent data** based on the type of analysis you are performing.
- Recognize **improperly used** data, **biased** analysis, and **misleading** data representations.
- Have the **ability to communicate** about data with others who may not be as data literate.

Even more components

Data literacy continuum

		Level 1	Level 2	Level 3	Level 4	Level 5	Level 6
Fifteen Databilities®		Basic Awareness With help	Follow instruction given to me	Work on limited tasks on my own	I can apply skills more broadly	Assist others in doing tasks	Teach others
Reading	Data Discovery						
	Evaluating and Ensuring Quality of Data						
Writing	Data Collection						
	Data Management and Organisation						
	Data Manipulation						
	Data Curation and Reuse						
	Metadata Creation and Use						
	Data Conversion (Format to Format)						
Comprehension	Data Analysis						
	Data Interpretation (Understanding Data)						
	Identifying Problems Using Data						
	Data Visualisation						
	Presenting Data (Verbally)						
	Data Driven Decision Making						
	Evaluating Decisions / Conclusions Based on Data						

Sohow long does it take?

Let me ask you

How long did it take you to learn?

The things you wish everyone knew
about data?

Online Courses

Ongoing.
30 min lunch
Once/week

5 hours
One Exam
Full Certification!

One & Done?

12 lessons &
12 group
discussions

50 hours
One project
= mastery

16 hours

Executive course
7 wks/28 hrs
\$6000

80 minutes and 8 quizzes!

Over & Over?

3 free YouTube
videos!

Focus on effects of
COVID on policy

Sowhat makes us care?

What made you interested in data?

Why should other people care?

What if.... ..

We make it personal?

(In the right way)

How did I
do, coach?

Your total sales revenue was **next to last** among the sales team

You saw **fewer patients** in the past week **than anyone** in the practice

You completed **fewer projects** than other team members

Customer satisfaction **was down** this month, **compared to** last month

Turnover is **higher** at your facility than others

How do we make data relevant?

1. Something of value at stake

Money

Recognition

Opportunity

Choice

Value

- Bonuses
- Awards
- Recognition
- Time off
- Bragging rights
- Safety (my job is secure)

How do we make data relevant?

2. Something I can influence

How Much

How well

How Fast

How long

Influence

- Time
- Effort
- Attention
- Experience
- Learning

How do we make data relevant?

3. Concerns: measurable factors that interfere?

Moving targets

Lack of Control

Unequal

Measurement Ambiguity
