

Collibra AI Governance

AI & Data Governance Demo Day

Cory Wagner, Staff Sales Engineer

50+%

expect **AI use to be widespread or critical** in their organization **by 2025**.

78%

said **scaling AI and ML use cases to create business value** is their top priority **over the next three years**.

70%

of new, internally developed applications will **incorporate AI- or ML-based models by 2025**.

Challenges of scaling AI

72%

said that **data is the biggest challenge** for the achievement of AI goals between now and 2025.

Data imperatives to ensure AI can be scaled

Improving processing speeds

Improving governance

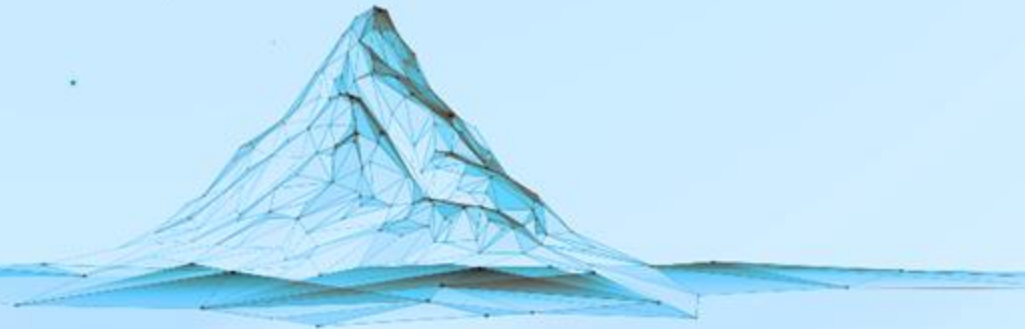

Improving quality of data

AI Model

What we see...

Many think an AI model is simple...
what you see is what you get.

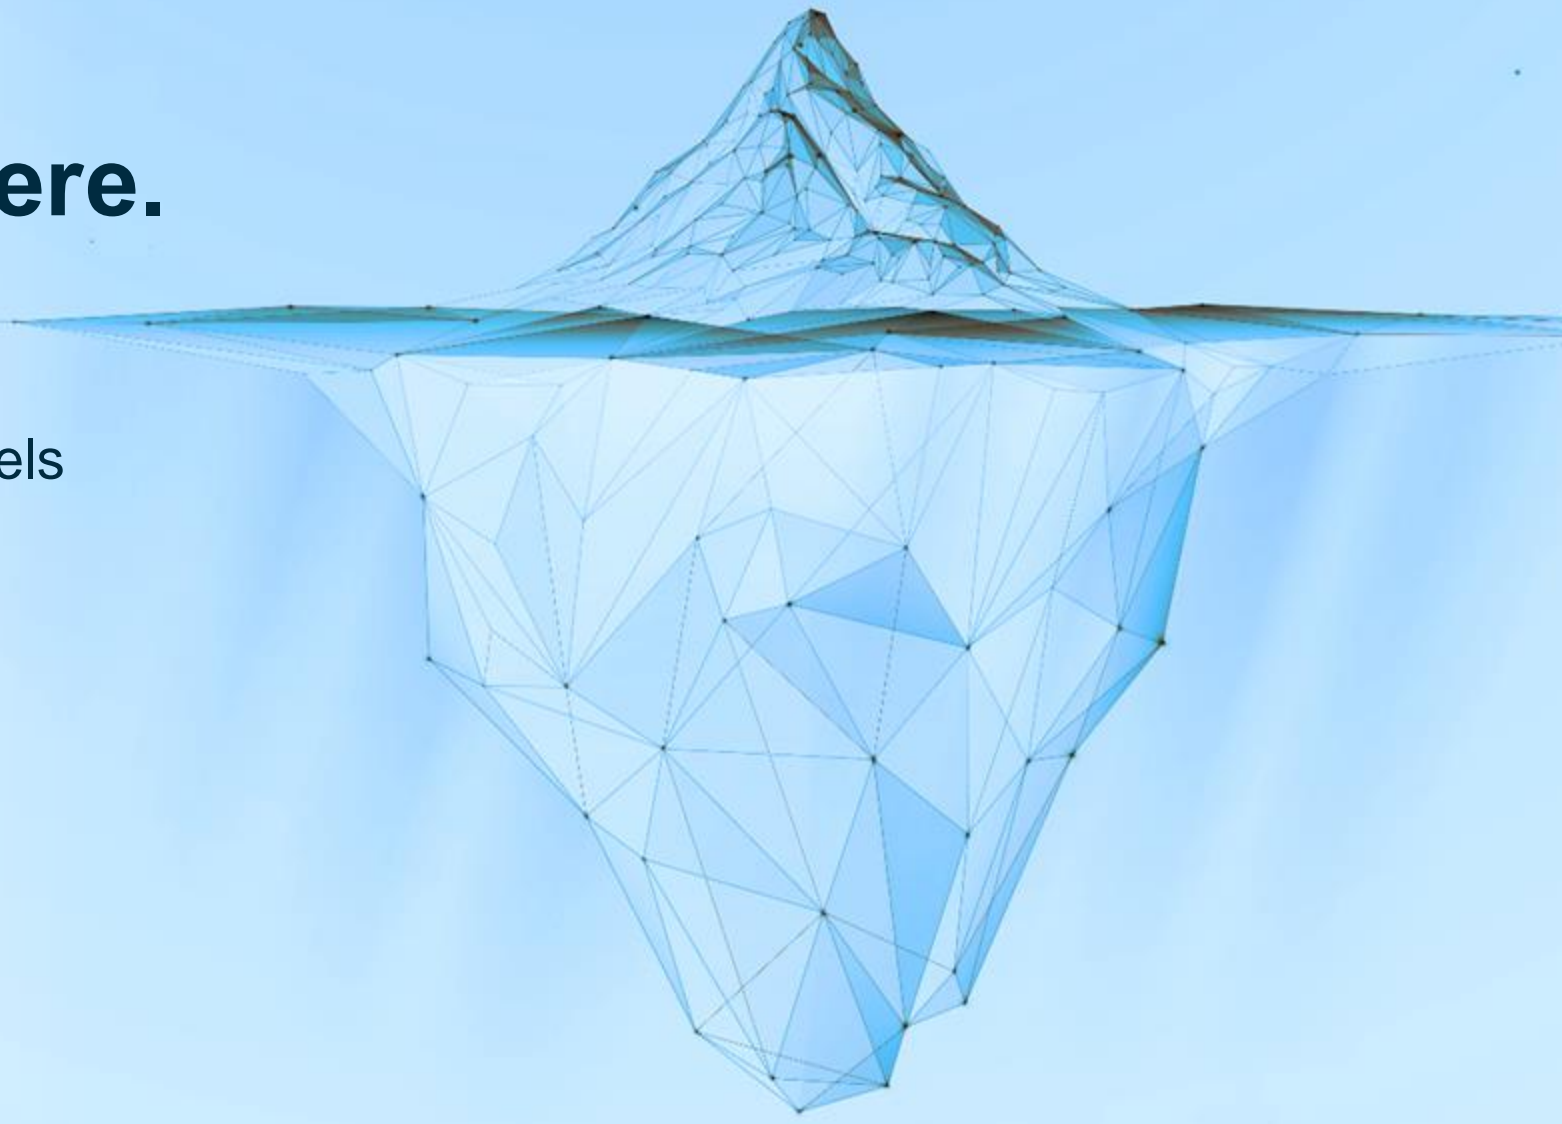

AI Model

What's actually there.

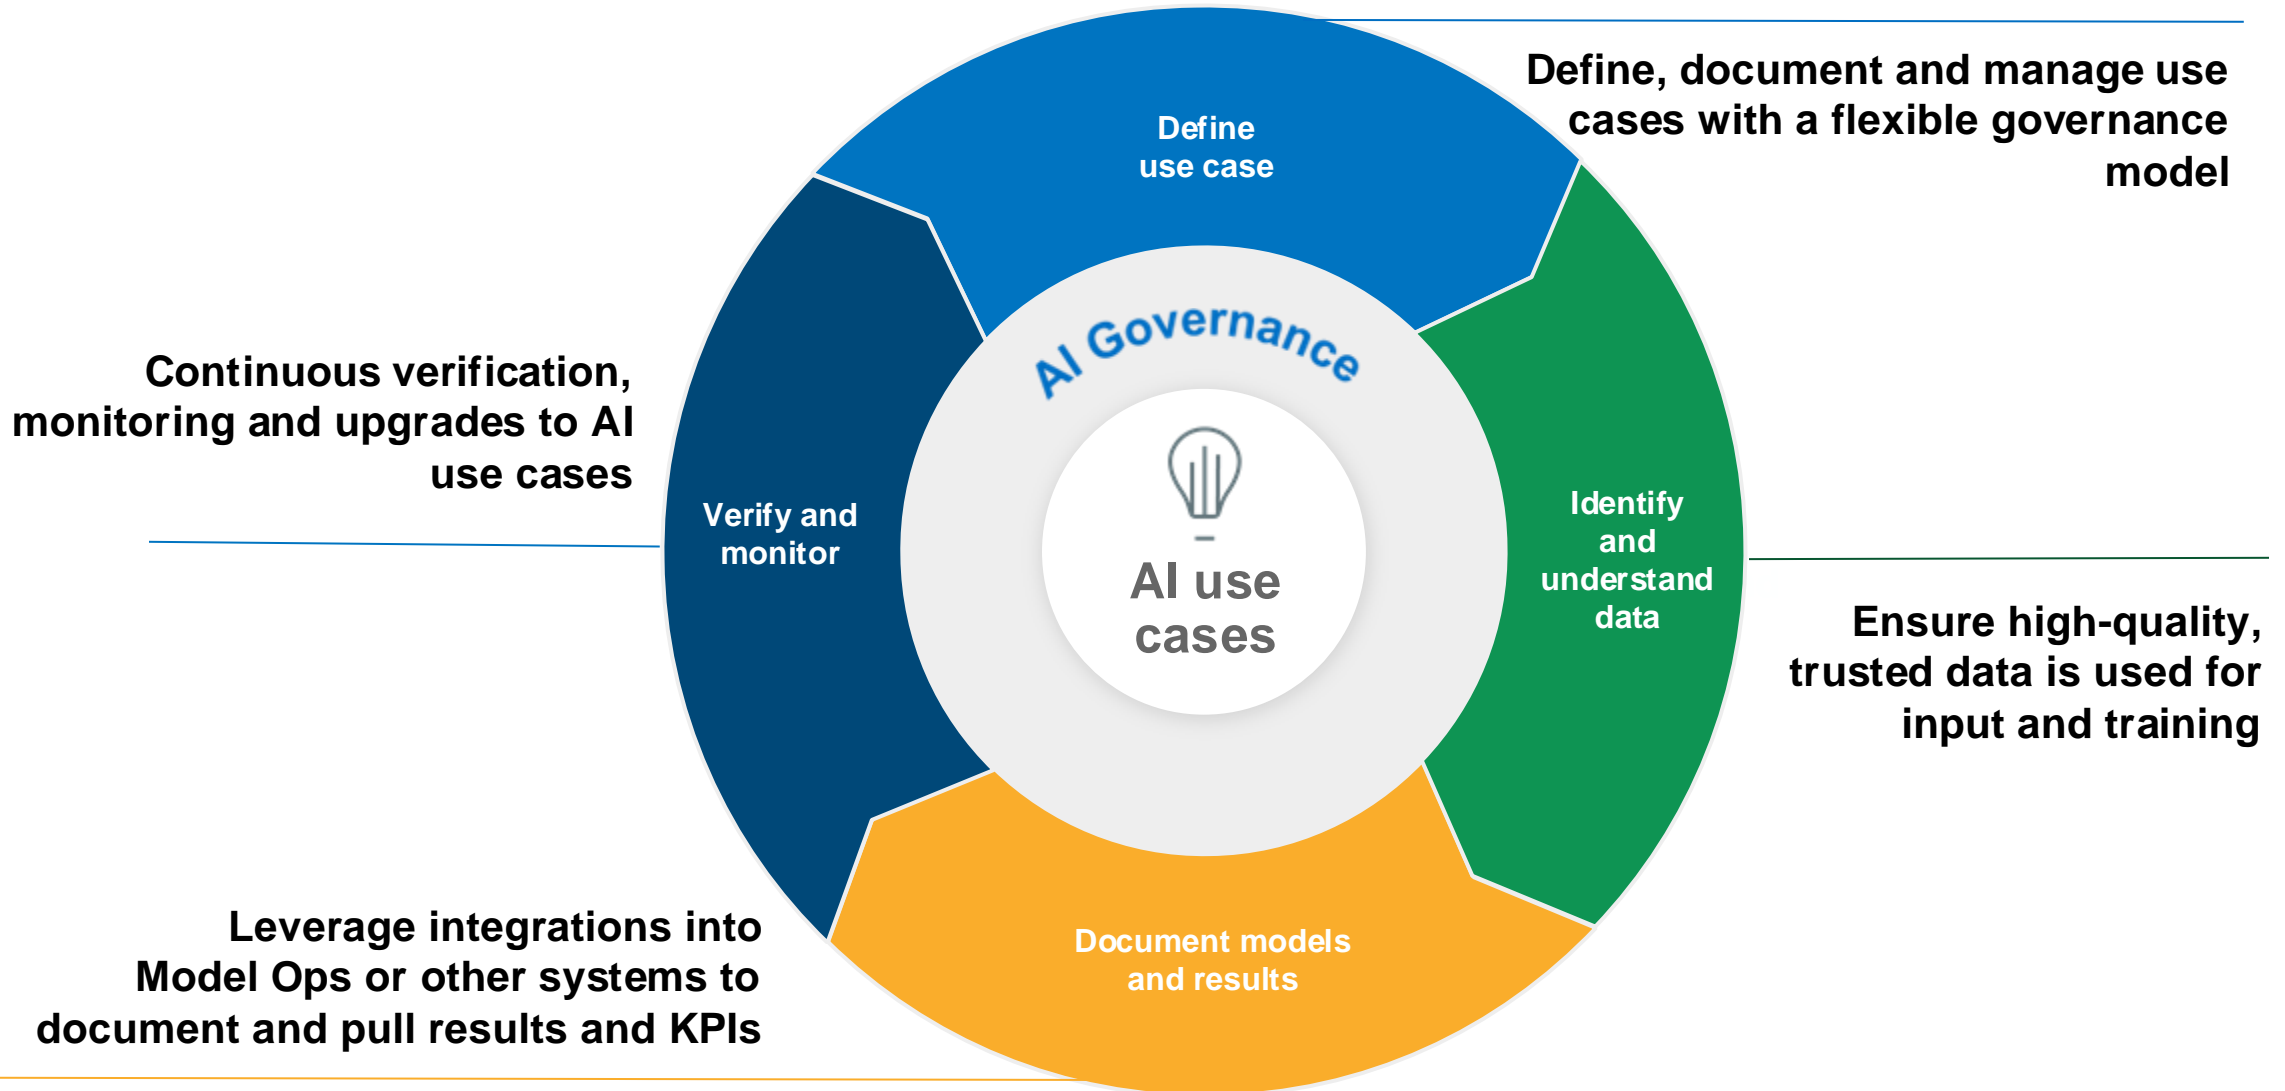

AI models and the number of models in production can proliferate and become extremely complex.

How do you control 100s or 1000s of models?

With AI Governance.

Collibra supports full lifecycle governance of AI use cases

Why AI Governance?

More Reliable AI

Catalog AI use cases with model cards, connecting AI use cases to underlying data, and continuously validating the reliability of that data.

More Traceable AI

Examine and explore the lineage of all AI inputs and outputs and build externally referenceable AI model cards to instill trust.

More Compliant AI

Discover sensitive data classes and enforce data access policies for greater control of data and reduced legal and reputational damage.
