

AI Meets Governance: Ethics, Oversight, and Automation

A monthly webinar series from

DATAVERSITY[®]

What role does an AI Governance program or organizational policy play in safely and responsibly using AI?

What kinds of things do you worry about ethics wise with uncontrolled AI use?

How can you tell if a process is responsible to automate using AI?

What is an indicator for you that an AI solution is beneficial for both an organization, its employees, and its customers?

When an AI system causes harm or makes a significant mistake, who should be accountable, and what should happen next?

Where should a human stay in the loop for AI-driven decisions, and how do you keep that oversight from becoming a rubber stamp?

Shadow AI: Employees are already using AI tools on their own. How should organizations balance enabling that experimentation with keeping control of sensitive data and decisions?

How do you know your AI governance is working? What metrics or signals show that it's reducing risk without slowing innovation?
